SUMMARY

Senior software engineer with nearly 7 years shipping React/TypeScript products across Brazil, Australia, and the US, specializing in web projects, data visualization, and award-winning interactive journalism with real institutional impact, spanning 250+ interactive pieces and 760k reader votes, and also working on the back end with REST APIs and Node.js/NestJS services, relational data modeling (PostgreSQL), and containerized Docker deploys, increasingly integrating automated, agentic-AI workflows into day-to-day work. C1-level English; open to remote or relocation.

EXPERIENCE

Frontend Developer II

Nov 2023 – Today

Grupo RBS · Porto Alegre, RS, Brazil

• in-person

- 250+ interactive pieces
- 760k reader votes
- R\$129B reconstruction spend tracked

- Won the “Prêmio RBS de Jornalismo, Esporte e Entretenimento” for the “Painel da Reconstrução” (Reconstruction Panel), a dashboard that gave the people of Rio Grande do Sul a practical (and even educational) way to follow public and private investment in the state’s 2024 flood-recovery effort. It went on to inspire similar government transparency initiatives.
- Created “Enquetes GZH”, a widely-adopted live-voting poll system built on Firebase that replaced an existing paid service; modeled the vote data layer with atomic counting and real-time updates, built an authenticated back-office (Google login restricted to corporate domains) for CRUD, and implemented origin-based access control via security rules and a Cloud Function. It became a hit during BBB 26, powering 71 live polls with top “Paredão” ballots drawing up to 144k votes.
- Designed and am building “Radar Legislativo” (pre-launch), a legislative-data platform composed of a NestJS REST API with PostgreSQL/TypeORM (migrations, Redis/Bull queues, and daily scraping of the Chamber of Deputies’ open data via cron), an authenticated Next.js editorial back-office, and an AI pipeline that generates voting summaries submitted to human review and approval before reaching the public frontend, with GitLab CI/CD covering tests, Docker image builds, and Kubernetes deploys on GCP.
- Worked in a newsroom of 1,000+ employees building interactive projects, shipping hundreds of editorial pieces for campaigns such as “Pra Cima, Rio Grande”.

Frontend Developer

Nov 2022 – Oct 2023

Flow Autobody · Brisbane, QLD, Australia

• in-person

• led a 5-dev team

- Led a 5-developer team, owning sprint planning, task distribution, and progress tracking in Jira.
- Developed multiple modules in Angular 11 and ReactJS with TypeScript, contributing to product architecture and scalability.
- Implemented and promoted development best practices, including clean code principles in both code creation and review processes.
- Structured essential development processes, establishing pull request workflows, code reviews, unit testing, and AGILE meetings.
- Collaborated directly with the Product Owner on feature definition and refinement, applying technical knowledge and business-rules expertise to deliver effective solutions.

Frontend Software Developer

Mar 2022 – Sep 2022

HelloGym · Osseo, MN, USA

• remote

- Developed interfaces for mobile and web application using React and Angular, implementing unit tests with JEST and Jasmine/Karma to ensure code quality and scalability.
- Created multiple screens/features following TDD methodology, converting PSD designs into pixel-perfect interfaces for the sports team management platform, always focused on responsiveness while maintaining optimized user experience.
- Implemented complex functionalities including booking system with Google Maps API integration.
- Established efficient communication with backend APIs through Axios.

Frontend Developer

May 2021 – Jan 2022

Hubcount · São Paulo, SP, Brazil

• remote

- Worked on developing and modernizing interfaces for an ERP system focused on accounting solutions, absorbing the accounting domain's business rules and actively participating in code reviews and daily meetings.
- Developed and refactored interfaces using HTML, CSS (SASS and LESS) and Angular, improving user experience and modernizing legacy components.
- Performed code optimization and cleanup, identifying and removing obsolete code to improve application performance and maintainability.

Mobile Developer Intern

Nov 2019 – Apr 2021

Idéia 2001 Informática · São Caetano do Sul, SP, Brazil

• in-person

- Developed applications using HTML, CSS, JavaScript alongside the framework AngularJS, oriented to the market of auto parts.
- Brought new ideas to the team whenever possible, always aiming for better development of the final product.
- Worked mainly on the frontend side of the projects, creating new functionalities and developing layouts.

SKILLS & TOOLS

01 frontend

- react
- next.js
- typescript
- angular
- tailwind css
- html / css
- sass

02 design

- d3.js
- gsap
- framer motion
- figma
- photoshop
- after effects
- blender

03 backend & cloud

- node.js
- nestjs
- php
- gcp
- aws
- cloudflare
- firebase

04 devops & testing

- git
- ci/cd
- npm
- webpack
- vite
- jest
- jasmine
- karma

05 ai engineering

- llm api integration
- rag
- embeddings / vector search
- prompt engineering / evals
- agentic coding
- ai agents
- mcp / tool use

06 leadership

- team leadership
- mentoring
- stakeholder communication
- code review
- sprint planning
- agile / scrum
- jira

EDUCATION

ILSC Brisbane

Specialized English course (CEFR C1)

2022

Rocketseat

React.js, React Native & Node.js bootcamp

2019 – 2021

Instituto Federal de Educação, Ciência e Tecnologia de São Paulo — IFSP

Technical Degree in System Analysis and Development

2019 – 2021

Liceu Santista

English certification (CEFR B2)

2018
